

PRESS RELEASE

New management for Zeppelin Power Systems GmbH

Carolyn Wolfsdörfer took over as Managing Director on August 1, 2025

Hamburg, August 4, 2025. Effective August 1, 2025, Carolyn Wolfsdörfer has taken over the management of Zeppelin Power Systems GmbH. The Supervisory Board of the Zeppelin Group approved her appointment at its meeting on July 24.

Carolyn Wolfsdörfer has been part of the management team as Chief Operating Officer (COO) since April 1, 2025. She previously worked for the ZF Group for more than 38 years, where her responsibilities included establishing and managing plants in the US. She has extensive experience in drive technology, engineering, controlling, production, and business development.

After Eva-Maria Graf left the company at the beginning of the year, Alexandra Mebus, the Zeppelin Group's CHRO, took over the management board on an interim basis. "With Carolyn Wolfsdörfer, we are gaining an experienced leader with strategic vision and strong implementation skills. I am convinced that she will safely and successfully guide Zeppelin Power Systems through the current transformation phase," said Mebus.

In her new role, Carolyn Wolfsdörfer will report directly to Patrick van Alem, the CEO of the Power Systems Strategic Business Unit (SBU). Van Alem became head of the SBU at the beginning of June, after the acquisition of PEPP Group BV.

"I am looking forward to continuing our collaboration and actively shaping the future of Zeppelin Power Systems," says Wolfsdörfer. "I believe that successful corporate management is based on a clear vision and a team that drives this vision forward with motivation and commitment. When these conditions are met – as they are here at Power Systems – anything is possible."

About Zeppelin Power Systems

Zeppelin Power Systems is one of the leading providers of propulsion and energy. The company is part of the internationally successful Zeppelin Group. Zeppelin is represented in 29 countries worldwide with over 12,000 employees. In the 2024 financial year, Zeppelin generated revenue of EUR 3.8 billion. With a completed acquisition in 2025, revenue will increase to over EUR 5 billion. Zeppelin Power Systems has been the exclusive sales and service partner for Caterpillar engines since 1954. More than 2,000 qualified employees offer customizable, highly efficient and durable system solutions and comprehensive services for industrial and marine applications, the oil and gas industry, rail vehicles and power and heat generation. Digital products, system components and ready-made solutions for the treatment of ballast water complete the portfolio.

About the Zeppelin Group

The Zeppelin Group offers comprehensive solutions in the construction, agriculture, recycling, energy and industry sectors: from machine sales and service to rental and project solutions as well as engineering, plant construction and drive systems. Zeppelin is represented in 29 countries worldwide with over 12,000 employees. In the 2024 financial year, Zeppelin generated revenue of EUR 3.8 billion. With a completed acquisition in 2025, revenue will increase to over EUR 5 billion. The Group organizes its cooperation in four strategic business units (Construction Equipment, Rental, Power Systems, Plant Engineering). Zeppelin GmbH is the holding company of the Group with its legal domicile in Friedrichshafen and its headquarters in Garching near Munich. The Zeppelin Foundation is the only shareholder of Zeppelin GmbH besides Zeppelin Luftschiffbau GmbH. Further information can be found at zeppelin.com.
